Abstract

Incomplete inguinal hernia is recurrence of inguinal hernia due to faulty repair of the inguinal hernia may be due to meshwork is not applied completely .it may be due to destruction of meshwork in inguinal hernia

Keywords: Meshwork; Incomplete inguinal hernia

Introduction

Hernia is protrusion of the body organs depending on region name is given inguinal hernia for [1] inguinal contents in inguinal region [2]

Incomplete inguinal hernia

It occurs due to incomplete protrusion of [3] inguinal canal contents in the hernia due to faulty meshwork

Recurrence can occur with 25 percent high chance in male as compared to female.

PICOS criteria is applied for selection

PICO criteria for study selection

Population Patients undergoing surgical repair of an inguinal or femoral hernia

Intervention Hernioplasty using mesh (open or laparoscopic)

Comparator Herniorrhaphy without mesh (open or laparoscopic)

Outcomes

Pain

Recurrence occurrence is higher in male as compared to [4] female

Incomplete inguinal hernia cause is mainly faulty meshwork

Surgical reintervention may lead to cure.[5]

Discussion

We discussed about the incomplete inguinal hernia, hernia, cure of hernia and incomplete hernia.

Conclusion

We conclude that surgical reintervention can help in the incomplete inguinal hernia
