In these days, Information and knowledge is facing with AI(Artificial Intelligent) and common or ancient parts of every sciences is changing, but we should notice to this fact that body of human is not a routine chart or copy of book chapter, we have some changes in reality that means differences. In General Surgery we have routine guidelines to solve problems but some cases are new that we called them as case report or case series.

Case reports have an important personality in therapeutic investigation. They make accessible exceptional apparitions into uncommon conditions, innovative managements, and conflicting properties, assisting as appreciated enlightening contraptions and creating innovative suggestion. They have some problematic with some fragments of shared information but they are forthcoming of scholarships.It has some restriction but profits is more for consultant and investigators. We can approximately the case reports are intermittent and infrequent but they are a portion of upcoming disciplines produce and requirements of any medical practitioner or technician to distinguish the treasured data's in this suitcases.

It is so important to accept new variation of new changes in sciences and facility of achieving helps with AI and open arms for new data's to make a breakdown in information and new records are predictable for ability and power of new generation of human and sciences, it is not based on previous ways in laboratory and exams that innovation can hold them in a small icon. Case reports and case series are a portion of importance in creation of this small icon to face new radiation of knowledge.
